

Verscom Solutions announced that Node4, a leading UK communication solutions provider, has selected Verscom Solutions to upgrade Node4's softswitching infrastructure, which will increase call handling capacity and accommodate expanding international traffic. Additionally, Verscom Solutions will support a secure migration of Node4's subscriber databases.

"We are pleased to upgrade our network capacity requirements and infrastructure with minimal service disruptions, while ensuring a secure migration of our subscriber info and history," said Richard Buxton, Voice Services Manager for Node4. "Verscom Solutions has delivered a flexible, advanced, and cost-effective solution that enables us to significantly expand international traffic. As a trusted partner of Node4 with a strong local presence in our region, we were confident that Verscom Solutions' professional services team and market-proven solutions were ideally suited for our complex business requirements."

Verscom Solutions improved Node4's call handling capacity by upgrading its softswitch infrastructure and simplifying the network edge with secure management, routing, and control of real-time voice and multimedia sessions.

"Node4 is an outstanding, fast growth operator in the UK and we are delighted to empower the company with best-of-breed solutions and professional services that support increased call handling capacity," said Mehmet Balos, CEO Verscom Solutions. "As an engineering-excellence organization, Verscom Solutions provides a comprehensive support strategy fully consistent with the needs and requirements of Node4, including a complex softswitch upgrade and data migration."
